

Technical people. Teams built around your project.

Industrial workforce, technical subcontracting and payroll services across Europe. Founded in Romania in 2013, RAM connects the required trades with the scope, site and programme.

Three ways to work with RAM

Workforce solutions. Selected technical personnel or crews join your site organisation under the agreed supervision model. RAM coordinates employment, documentation and mobilisation.

Technical subcontracting. An agreed work package, with installation deliverables, supervision, interfaces and acceptance requirements defined before mobilisation.

Payroll and employment support. Payroll-only and employment-through-RAM arrangements are defined separately for the country, employer setup and assignment. [Payroll services](#)

Industries and technical disciplines

Marine & shipbuilding

Technical crews for newbuild, outfitting, ship repair, cruise refit and riding-squad assignments.

Offshore, oil & gas

Welding, piping, structural and mechanical work for the agreed fabrication, maintenance or project scope.

Renewable energy

Solar PV mounting structures, module installation and related site work under an agreed scope.

Data centers

Suspended cable containment supports, cable trays and cable ladders, supported by the Frankfurt project record.

Welding & piping

Welders, fabricators and pipefitters selected against the materials, processes and qualification requirements of the project.

Project-specific qualifications and documentation are checked against the agreed assignment. This overview is not a technical certification or a commitment to a particular headcount or mobilisation date.

Experience you can inspect.

The public portfolio contains original site photography and scope descriptions. Explore the records relevant to your requirement; the delivery arrangement for a new assignment is agreed separately.

Data center works | Frankfurt, Germany

Suspended supports, overhead cable trays and ladders, installation teams and separately documented electrical works.

Brewery piping & welding | Denmark

Stainless steel pipework, tank connections, process equipment and workshop fabrication.

Solar PV construction | Corbii Mari, Romania

Photovoltaic structures and panel installation. The size of the wider park is separate from RAM's own installation scope.

Marine project evidence

Published records include aluminium shipbuilding workshop work and cruise-vessel dry-dock pipework.

Prepare a practical project brief

Include the country and site, work package or drawings, required disciplines, planned start and duration, approximate quantities, working conditions and access arrangements. State the intended supervision model and who provides materials, tools and access equipment. Identify documentation, inspection and handover requirements.
